As a Team we are building a stronger community

We find ourselves in the midst of unfamiliar territory one thing is certain, we're all in this together and we need each other's support now more than ever. H-Line are manufacturing to support the country during the COVID-19 pandemic by providing tents as medical treatment facilities and mobile screening areas. The interior wall designs offer a universal tent system with countless applications. Easy and fast to assemble in almost any location within a very short time frame. A range of sizes available, ensures there's a structure to suit your needs. We hope this brochure is of interest to you. For further information please contact our competent team that are available at any time.

Equipment Features

Dynamic Walling System Secure Separation

The walls have been configured to allow for optional layouts. Simply pull one wall back to create a room large enough for a hospital bed, while still maintaining safe separation between patients and treatment personnel. The PVC walls are easy to sanitize and all fabrics come with an Australian fire certificate. Each cubicle can be securely closed with a magnetic locking system.

Mesh Windows Perfect Ventilation

The outer walls of each structure feature a PVC mesh window. This allows air to circulate inside each cubicle and for natural light to shine in making it more comfortable.

Custom Designs Hand Access Points

H-Line can custom design key features to suit your needs. Walls with hand access points and clear plastic flaps helps access the patient without exposure to emergency personnel. The plastic flap can easily be hooked up out of the way during use and cleaned after, creating a sanitary environment for staff and patients.

H-Line Structures multifunctional structures are the ideal space solution for Emergency Clinics, Training facilities, Hospitals, Military, Charities and Aid organisations.

High quality anodized aluminium frames and PVC covers are great for keeping you dry and protected.
